:To whom it may concern - I can't say that I agree with your ideah for the new plant - although having this new plant would help lower pollution rates a great deal it does however still pollute atleast to some exent.

I strongly feel and know that I am not alone in this - and your ideah to capture carbon is not a permanent sollution either - and you didn't even state wether you planned to do that - but even if you did eventually you would run out of places to put it and storing it in the earth where we live will eventually have consequences and there is nobody who can say for sure that it wouldn't, because nothing is for certain.

So being that this new plant would be at best a temporary sollution why go through with it at all.

What we really need not only around here but every where is a clean and totaly non polluting renewable power soure, and when we do get a new plant it should be one that can supply us with that not only in MN but also to the rest of the world.

sighned, a concerned individual
